

A New Program for Younger Children

WHAT'S THAT SOUND ?

Paul Odenwelder loves music. His enthusiasm is infectious and kids and adults alike are amazed at his musical skills. Soon they start eagerly wishing they could make music too.

In his new show for young children, **What's That Sound**, he starts at the beginning by showing many ways to make the sounds that, put together can make music. He presents what makes a tone, a pitch, harmony and rhythm with both standard musical instruments and instruments with unusual origins and sounds.

He's a master of guitar, but the fun really gets going with his collection of odd musical instruments from around the world. Children become the vocal rhythm section and sometimes the soloists.

Then out comes the Hose-o-phone, Washtub Bass, pipe band with nose flute, kazoos and swirly twirlylys. Kettles, pots, plastic buckets and empty cans are the percussion section. Children become aware of the music in the sounds around us all the time.

For older children and a longer show Paul can add a special segment on the science of sound. Grab your sound boards and start surfing the sound waves.
